

OBITUARY

George C. Steyskal
1909–1996

George Constance Steyskal, dipterist and former president of the Entomological Society of Washington, died in Gainesville, Florida on May 30, 1996. He had moved to Gainesville after the death of his wife in 1991. He is survived by a son, Neil Morgan Steyskal of Washington, D.C., and by two grandchildren, two great-grandchildren, and two brothers. A talented amateur with a publication record that few professional taxonomists would equal, tremendous knowledge of languages, and generous sharer of his expertise, his career merits recounting.

George was born in Detroit, Michigan, on March 30, 1909, the oldest of seven children. Early on, he entered factory work to help the family, graduating from the Henry Ford Trade School in Detroit. He worked for many years as a tool-and-die maker, finally becoming superintendent of a plant in that craft.

Although an amateur and employed in industry, his taxonomic papers, often accompanied by his own drawings, attracted attention. When a vacancy occurred in the U.S. Department of Agriculture's organization for taxonomic entomology, now known as the Systematic Entomology Laboratory (SEL), he applied and was appointed, at first as an Agricultural Research Technician, soon as Research Agriculturist. In spite of his publications and recommendations from prominent entomologists who knew him and his abilities, his lack of formal academic qualifications did not match the established requirements for Research Entomologist. However, his already excellent publication record won him appointment to a research position, for which he did full justice as his numerous publications

attest. He was employed at SEL in Washington, D.C., from July 2, 1962 until his retirement on Sept. 30, 1979. He continued to work full time at SEL and the National Museum of Natural History, where he was a Research Associate, until after the death of his wife and his move to Florida, where he became a Resident Research Associate of the Florida State Collection of Arthropods.

George had broad interests in natural history, especially in insects, snails, and botany. His knowledge of plants, aided by his phenomenal memory, was wide ranging. Eventually he concentrated on Diptera and especially on the Acalypratae, to which most of his published papers were directed. His assignment in SEL especially included plant-feeding Diptera of the families Tephritidae (fruit flies) and Agromyzidae (leaf miners), and here his knowledge of the plant hosts was especially valuable. No doubt many of his papers on varied subjects involved material that crossed his desk in SEL for identification, but the point is that he did something about it as well as about new material discovered in the National Collection at the Museum, and about linguistic or nomenclatural questions brought to him for advice.

The family Sciomyzidae was one of his early loves, and one of his best contributions. For years, North American species of the genus *Dictya* had been identified as *D. umbrarum* (Linnaeus), except for five species described by Curran in 1932. After describing a few species in 1938–1939, George studied the genus deliberately for some years, and in 1954 produced a definitive review of the genus with eight plates of figures of the male genitalia. By the time

George C. Steyskal at work (1977)

of the Nearctic Diptera Catalog (1965), George had described 13 of the 19 species then recognized in *Dictya*.

His publication record totals 446 titles (See Bibliography, based on his own list which often grouped the titles in catalogs). The breadth and size of his knowledge, interests, and contributions in Diptera are evident in the following figures:

4 new subfamilies in 4 different families;

24 new genera and 2 new subgenera in 10 families, mostly in his favorites: 9 in Sciomyzidae, 8 in Otitidae plus Platystomatidae;

347 new species (including six *nomina nova* and eight subspecies) in 32 families (as presently recognized), chiefly in 22 of Acalypratae, with scattered species in 10 other families, all species by Steyskal alone except for 34 co-authored with nine other persons. All this in addition to designations of type species and lectotypes, new synonymy, corrections of authorship or dates of publication, elevations in rank of family-group names, and a number of pertinent

comments on applications in the *Bulletin of Zoological Nomenclature*.

George was a good cataloger, and he never failed to respond to requests for cooperation in the various regional catalogs. Thus he contributed 15 families for the Nearctic Catalog (1965); later 15 Neotropical, 16 Oriental, and 5 Afrotropical. In addition, he contributed chapters on 14 families (three co-authored) for the *Manual of Nearctic Diptera* (1981, 1987).

His cooperation, generosity, and ever-increasing publication record were also recognized by genera and species named in his honor. Four genera are based on his name: *Steyskalia* Aczél 1959 in Micropezidae, *Laksyetsa* Foote 1978 in Tephritidae, *Steyskaliella* Soós 1978 in Platystomatidae and *Steyskalomyza* Kurahashi 1982 in Dryomyzidae. Some 28 species have been named *steyskali*, but there is no up-to-date list of these. The published regional catalogs list ten such names but there are undoubtedly more in the years subsequent to the catalogs. As a further tribute, volume 3 of the Oriental Catalog (1977) was dedicated to George.

Another feature of his publication record is the number of book reviews, which often contained pertinent comments on the authors' treatments of scientific names. Oddly enough, in his personal list of publications he recorded the reviews but usually did not number them in his own total!

A remarkable facet of this amateur-become-professional was his lifelong interest in linguistics, both classical Latin and Greek and modern languages. He translated all (perhaps almost all!) the European languages and had studied others such as Arabic and Japanese. For recreation he read books in Italian. He was always helpful and generous with his time as colleagues visitors, and staff from around the Museum came to him for help with a phrase, a description, a type designation, or a translation from some foreign language. This made him a natural adviser on scientific names for the *Proceedings of the Biological*

George identifying flies, above with Keith Harris (on right) 1981, below with Sidney Camras (on the right) 1988.

Society of Washington and the *Proceedings of the Entomological Society of Washington*, which he served faithfully and promptly for over twenty years. Further, from 1980 until his death he was Translation Editor for Scripta Technica's *Entomological Review*

(the Russian *Entomologicheskoe Obozrenie*). In the *Review* for June 1996, Scripta Technica published a fine tribute to his "untiring effort, his great linguistic skills, and his vast knowledge of entomology." During his years of service for the two Washington

journals, he was often able to correct errors in names before they appeared in print, or suggested names that better expressed the meanings intended by authors. I can testify personally to George's ability as a word-smith in devising scientific names. In his own papers, one of his most brilliant proposals was for an anomalous genus of uncertain position whose exact place in Acalyprate Diptera was long moot. His name: *Cinderella!*

His long interest in linguistics is evident in the number of titles dealing with scientific names and their correct spelling, gender, stem, and similar considerations. I counted at least 27 1945–1989, that clearly dealt with the grammar of names, besides some general papers and numerous items in regular taxonomic publications. As would be expected, most such papers concerned Diptera, but his wide-ranging interests, and no doubt in part the problems brought to him for advice, resulted in papers on names and their grammar in such varied groups as Amphibia, Arachnida, Coleoptera, Dermoptera, Heteroptera, Hymenoptera, Mallophaga, Plecoptera, and Psocoptera. His examples and recommendation have encouraged many authors to include a few lines on Etymology to show the derivation of their new scientific names.

George was an excellent collector and observer in the field, and his published papers from time to time reflected this, such as his notes on pre-copulatory and mating behavior in Dolichopodidae, color and color pattern in the eyes of live flies, and the dipterous fauna of tree trunks. As the years passed, there were fewer such papers and more on straight descriptive taxonomy.

His industry experience and natural talent were revealed many times in things he would construct, from a large and complete doll house for his granddaughter to a drop-leaf table on which he and I duelled in a couple of games of rapid chess during our lunch breaks. He developed a method and equipment for making non-glass microvials for storing insect genitalia (see Gurney,

Kramer & Steyskal 1964). He was always interested in matters of technique of all kinds, and wrote occasional papers on such subjects. Hence he was the logical lead author in an up-to-date revision of a large bulletin on "Techniques for Collection and Preservation of Insects and Mites" (see Steyskal, Murphy & Hoover 1986).

George was a loyal member of scientific societies, beginning with the local Detroit Entomological Society, which evolved in 1954 into the Michigan Entomological Society, of which he served as first President in 1955–56, and was voted Honorary Member in 1970. He joined the Entomological Society of Washington in 1947 (President in 1976) and the Entomological Society of America in 1949, continuing in both until his death. He was also a member, at least for some period of time, of other societies of which we know the Biological Society of Washington, Entomological Society of Canada, Florida Entomological Society, and the Society of Systematic Zoology.

Of his many interests, one that merits special mention is his love of and abiding devotion to classical music. He had a vast collection of records and great knowledge of them. He loved to sit quietly and listen to the music, sometimes singing in Italian along with the soloists.

Yes, George had faults, as who does not? Those in daily contact with him, in such matters as curation, protection of boxed specimens from insect pests, and reaction to manuscript committee's comments on his prose, were aware of some weaknesses, perhaps not unexpected in a chiefly self-taught individual without formal training or professorial guidance or oversight. With his brain power, what might have he accomplished with academic training!! Or would it have spoiled him? His colleagues recall with pleasure his remarkable memory, amazing knowledge of languages, breadth of interests, and the generous helpfulness of this multi-talented, self-taught amateur with a record of accomplishments that eclipses that of many professionals. As the publishers of

Entomological Review expressed it in a tribute to George in the June 1996 issue of the *Review*, his professional associates "will always remember his good humor, energy, zest for life and kindness, as well as his encyclopedic learning." He was truly an unusual individual. Having survived a quarter century of car-pooling with George, I can even chuckle over memories of his driving!

ACKNOWLEDGMENTS

I thank Jennifer Fairman for preparing the plates and Chris Thompson for preparing the list of publications. The list of publications was prepared from George's own list, but carefully checked against the originals. George's own annotated set of his papers is now held by the Systematic Entomology Laboratory, USDA. The photographs were taken by Chris Thompson (fig. 2) and George Byers (figs. 3–5). These photographs and most of George's scientific papers are now in the Smithsonian Archives. So, finally I thank William Cox of these Archives for his assistance.
